ALL ABOUT CRYPTO CURRENCY

EVOLUTION OF CRYPTO CURRENCY

Bitcoin? Ethereum? Ripple ? A global virtual currency designed to work as a medium of exchange? 20 years ago, this was unheard of and deemed almost impossible, and yet as of today 3 in 4 people use cryptocurrency, and around 2.9 to 5.8 million Americans alone have invested, with hopes of making them better off financially in the future

WHAT IS DECENTRALIZED

In the blockchain, decentralization alludes to the transfer of supervision and decision-making from a centralized association (individual, corporation, or group of people) to a dispersed network. In blockchain, decentralization refers to the transfer of control and decision-making from a centralized entity (individual, organization, or group thereof) to a distributed network. Decentralized networks strive to reduce the level of trust that participants must place in one another and deter their ability to exert authority or control over one another in ways that degrade the functionality of the network.

WHAT IS BLOCKCHAIN TECHNOLOGY

Blockchain is a shared, immutable ledger that facilitates the process of recording transactions and tracking assets in a business network. An asset can be tangible (a house, car, cash, land) or intangible (intellectual property, patents, copyrights, branding).

SCALIBILITY

- BSC offers fast block times (around 3 seconds)
- Very low transaction fees
- Supports decentralized applications (dApps) and DeFi projects

EVM COMPABILITY

- Fully compatible with the Ethereum Virtual Machine (EVM)
- Allows developers to easily migrate Ethereum-based projects to BSC

DUAL CHAIN ARCHITECTURE

- Works alongside Binance Chain
- Enables users to transfer assets seamlessly between the two chains
- Provides flexibility and scalability
